You are an expert web designer and developer. Your task: completely rebuild the website novexasolutions.uk for my software development business, Novexa Solutions. The current website is broken in ways that cost me clients (full detail in section 3 below). Rebuild it as a modern, credible, mobile-first website using ONLY the real facts in this prompt. Do not invent anything — no fake clients, no fake numbers, no fake testimonials, no fake company registration, no stock photos of people pretending to be me or my team.

---

1. THE BUSINESS — TRUE FACTS ONLY

- Business name: Novexa Solutions. Website: novexasolutions.uk. Email: contact@novexasolutions.uk.
- Founder: Ateeq Lateef — a Flutter developer based in Lahore, Pakistan.
- Education: BSc Computer Engineering, Bahauddin Zakariya University, Multan (2016–2020), CGPA 3.34/4.00.
- Experience: 6 years building mobile apps and websites (Oct 2020–present). Previously Flutter Developer at Tech Solutions Pvt. Ltd., Lahore (Oct 2021–Sep 2024); Lab Engineer, University of Lahore (Sep 2024–Mar 2026); freelance Flutter developer since Mar 2026; founder of Novexa Solutions since Sep 2026.
- What I actually do: Flutter mobile apps (Android + iOS from one codebase), e-commerce and subscription apps, food delivery apps, on-demand service apps, business/POS apps, AI-powered tools (e.g. WhatsApp CRM), websites (e-commerce, food, corporate, healthcare, hospitality), API & backend integration, Firebase, payment gateway integration, admin panels & dashboards, app maintenance and modernisation.
- Tech stack (verified): Flutter and Dart, Firebase, REST APIs, payment gateway integration, admin panels and dashboards. Do NOT list native Kotlin/Swift, DevOps/AWS, UI/UX design or product management — those are not verified.
- Who I serve: (a) D2C and subscription brands in the UK, USA, Europe and Australia that want an app for repeat orders, subscriptions and new-product alerts; (b) software/digital agencies that need Flutter development capacity white-label (I build under their brand, they keep the client and the margin).
- How I work: founder-led — the client talks to the person who builds the app. One fixed-scope proposal with a quote and timeline. Weekly live demos. The client owns the code and the store accounts from day one. NDA welcome on request.
- Verified counts (use ONLY these, never "90+ apps" or "100+ products"): 12 Android apps with live Google Play links, and 100 websites listed in the portfolio (full lists in section 6).
- LinkedIn: linkedin.com/in/ateeq-lateef. Headline: "Flutter Developer & Founder, Novexa Solutions".
- Contact: email contact@novexasolutions.uk, reply within 24 business hours. [PLACEHOLDER: WhatsApp number — do NOT add a WhatsApp number or button until I confirm the business number. My LinkedIn shows +92 308 7310103 but that is NOT confirmed as the business

WhatsApp. Leave a clearly marked placeholder.] [PLACEHOLDER: booking link — do NOT add a "book a call" link until I confirm a booking account (e.g. Calendly). Leave a clearly marked placeholder.] [PLACEHOLDER: working hours — draft as Monday–Friday, 09:00–18:00 UK time, and "working hours overlap with UK business hours", but mark both as TO CONFIRM.]

---

2. POSITIONING — WHAT THE NEW SITE MUST SAY

The site must present the truth: a founder-led Flutter studio in Lahore, Pakistan, run by Ateeq Lateef, serving agencies and D2C/subscription brands in the UK, USA, Europe and Australia. Tone: plain, honest, direct. No corporate-speak, no "enterprise-grade", no "mission-critical", no "ambitious enterprises". Write in first person ("I build...") where the founder is speaking. The visitor must be able to see, in under 30 seconds: what I build (Flutter apps), who it is for (brands + agencies), proof it is real (live apps with Play Store links), and how to contact me.

---

3. CURRENT WEBSITE — EVERY ISSUE, IN DETAIL (FIX ALL OF THESE)

The live site (checked 7 Nov 2026) has 5 pages only: Home, Services, Pricing, About, Contact. No Portfolio/Work page, no Privacy page, no blog. Sitemap last modified 5 Sep 2026.

1. **ZERO images.** 0 HTML images on every page — entirely text and icons, only an "N" logomark. The site looks empty and unproven. Fix: real screenshots of the actual apps and websites (see section 6). Where a screenshot does not exist yet, use a clean text/graphic card — never a fake image, never a stock photo of people, never an AI-generated photo of a person.
2. **The site contradicts what I sell.** It never mentions "Flutter", "Ateeq", "Lahore" or "Pakistan" anywhere. Instead it sells React Native plus "iOS (Swift UI concepts)" and "Android (Kotlin concepts)". My outreach sells Flutter by Ateeq in Lahore — a prospect who clicks through sees a different company. Fix: Flutter-first everywhere, founder named on the homepage and About page, Lahore/Pakistan stated plainly.
3. **Fake portfolio.** The only "portfolio" is 4 unnamed "Featured Systems & Case Architectures" (Cloud Orchestration Dashboard; Cross-Border Wealth & Treasury Suite; Enterprise Knowledge Engine; Headless Commerce) — no client name, no date, no screenshot, no live link. They carry unsourced metrics: "Perfect 100/100 Core Web Vitals", "Over 75% reduction in internal policy search latency", "Sub-50ms data streaming", "<100ms Latency Objective", "100% Typed Architecture". None of this is evidenced. Fix: DELETE all four entirely. Replace with the real portfolio in section 6.
4. **Unverifiable "UK-Registered" claim.** "UK-Registered", "based in the United Kingdom", "UK Based Agency" appear everywhere, but there is NO Companies House number, no registered address, no VAT number, no named director, no team, no photo. Fix: REMOVE the claim completely. Say "Based in Lahore, Pakistan — working with clients in the UK, USA and

Europe". Only re-add a registration claim if I provide a company number and registered address (I have not).

5. **Fake team.** The copy talks about "senior software architects", "technical directors", "our engineers" and a "leadership team". It is a one-person, founder-led studio. Fix: remove ALL plural team language. "I" / "founder-led" throughout.
6. **Fake stats.** "90+ Apps Built & Published", "100+ Digital Products Delivered", "12+ Products Live on Playstore & Appstore", "6 Core Disciplines" presented as a stat. The real counted figures are 12 Android apps with live Play Store links and 100 websites listed. Fix: use ONLY the counted figures. Do not claim any app is on the Apple App Store — the portfolio has Play Store links only.
7. **Pricing is wrong for the business.** Prices are in USD ($799 / $1,799 / $3,499, plus $499 audit) with no currency note, on a site calling itself a "UK" agency. All three tiers are page-count WEBSITE packages — there is no app pricing and no AI pricing at all. No VAT note, no timeline, no payment terms. Fix: keep the three website tiers with an explicit "All prices in USD. Starting prices — the final quote depends on the agreed scope." note. Mobile apps: custom quote after a short scoping call (no invented fixed price). Add the audit: "$499, credited against a full project if you proceed." Mark VAT, deposit/milestone structure and post-launch support length as [PLACEHOLDER — to confirm].
8. **One high-friction contact channel.** Email and a form only. No phone, no WhatsApp, no booking link. The form has no privacy notice even though it collects personal data. Fix: email + form (keep the existing fields: Full Name, Work Email, Company/Organization optional, Estimated Budget optional, Service of Interest, Project Outline & Objectives), add the privacy notice from section 5 directly under the form, and leave WhatsApp and booking as marked placeholders (see section 1).
9. **Footer typo on every page:** "© 2026Novexa Solutions" (missing space). Fix to "© 2026 Novexa Solutions".
10. **Thin, repetitive, templated feel.** The same pricing cards, process, tech stack and "What Clients Value" generic cards repeat verbatim across Home, Services, Pricing, About and Contact. Fix: de-duplicate — each block lives on its own page only.
11. **No proof of any kind.** No named client, no testimonial, no logo, no review, no screenshot, no live site, no app-store link, no GitHub link anywhere. Fix: the Portfolio page (section 6). Do NOT invent testimonials — if there is no real client quote, there is no testimonial section.
12. **No human being visible.** No founder name, no founder photo, no LinkedIn link. Fix: founder section on the homepage and a full About page (section 5). Photo is a [PLACEHOLDER — I will supply a real photo; use a clearly marked placeholder box, not a stock/AI person].
13. **SEO problems.** The homepage is indexed only for the exact brand name; subpages are not surfaced. The brand name collides with an unrelated "Novexa Solutions" (tiles, Kenya). Fix: proper title tags and meta descriptions per page (given in section 5), clean URLs, robots.txt and sitemap kept working.
14. **Mobile rendering was never verified.** Fix: build mobile-first responsive; test the layout at phone width — the site must look right on a phone, not just on desktop.

15. **A dead CTA.** "Schedule Initial Scoping Session" leads nowhere (no booking link). Fix: remove it until a booking account exists (placeholder, see section 1).

---

4. PAGES TO BUILD

Keep the existing 5 pages (same URLs): Home, Services, Pricing, About, Contact. ADD two new pages: Portfolio (/portfolio) and Privacy (/privacy). That is 7 pages total.

---

5. FULL COPY FOR EVERY PAGE (use this text; do not rewrite the facts)

HOMEPAGE

- Title tag: `Novexa Solutions | Flutter App Development for Brands & Agencies`
- Meta description: `Novexa Solutions builds Flutter apps for Android and iOS — for D2C and subscription brands, and for agencies that need mobile development capacity. Founder-led, based in Lahore, working with clients in the UK, USA and Europe.`
- Hero: **"Flutter apps for brands and agencies that need them shipped."** "I'm Ateeq Lateef, a Flutter developer based in Lahore, Pakistan. I build Android and iOS apps from a single Flutter codebase — for D2C and subscription brands that want repeat orders in their customers' pockets, and for agencies that need mobile development capacity without hiring." Buttons: `Start a project` (→ Contact) · `See selected work` (→ Portfolio)
- Who this is for: **For D2C and subscription brands** — "Your customers already buy from you. An app gives them subscriptions, repeat ordering and new-product alerts in one place — instead of losing the sale to a browser tab." **For agencies** — "You sell websites, branding or marketing, and your clients keep asking for an app. I build it white-label under your brand — you keep the client relationship and the margin."
- What I do (short list): Flutter mobile apps for Android and iOS from one codebase; e-commerce and subscription apps (repeat ordering, subscriptions, push notifications); websites for e-commerce, food, corporate and healthcare businesses; API and backend integration, payment gateways, Firebase, admin panels; fixing and modernising existing apps.
- Founder line: "Novexa Solutions is run by its founder, Ateeq Lateef — a Flutter developer with 6 years of experience building mobile apps and websites. You talk to the person who builds your app. There is no handover to a team you never meet." [PLACEHOLDER: founder photo + LinkedIn profile link here.]
- Selected work teaser (real items only, with live links): Tejarah World Marketplace (e-commerce marketplace app, Android — lead developer — Play Store link in section 6); Ranchers Cafe (food ordering app and website); Khidmah360 (on-demand home services app — customer +

partner apps); Friday Charm (perfume e-commerce app and website). Each item must link to its real Play Store page and/or website. Do NOT show any number (rating, downloads) for these — none is verified.

- How a project works (short): Discovery → Requirements → Proposal → Development → Weekly demos → Testing → Delivery → Maintenance. "You see a working demo every week and you own the code and accounts from day one."
- Contact strip: "Email: contact@novexasolutions.uk — I reply within 24 business hours." [PLACEHOLDER: WhatsApp line — add only after I confirm the number.]

SERVICES

- Title tag: `Flutter App Development & Web Development Services | Novexa Solutions`
- Meta description: `Flutter mobile app development, e-commerce websites, API and backend integration, and app maintenance — from a founder-led studio working with UK, US and European clients.`
- Intro: "Novexa Solutions builds mobile apps and websites for two kinds of client: D2C and subscription brands that need an app their customers keep using, and agencies that need Flutter development capacity without hiring. Everything is built by the founder, Ateeq Lateef, and every project follows the same process — so you always know where it stands."
- Service 1 — Flutter Mobile App Development (flagship): "One codebase. Android and iOS. Your app is built in Flutter, so Android and iOS share one codebase instead of two separate native apps. That means one build to test, one set of fixes, and faster delivery." Covers: new apps from scratch (e-commerce, subscription, food delivery, on-demand services, business and POS apps); subscriptions, repeat ordering, push notifications, new-product alerts; payment gateway integration; Firebase, REST APIs and backend integration; admin panels and dashboards, customer and vendor apps; AI-powered features where they genuinely help (for example WhatsApp CRM tooling). Priced by custom quote after a short scoping call.
- Service 2 — Web Development: "E-commerce and business websites. The portfolio lists 100 websites with live links, across fashion, beauty, supplements, perfumes, general e-commerce, food and restaurants, corporate, technology, healthcare, hospitality, home services and more. Examples: P448 (https://p448.com), Tejarah World (https://tejarahworld.com), Paper & Tea (https://www.paperandtea.com), Callaway Golf (https://www.callawaygolf.com)."
- Service 3 — API & Backend Integration: REST API integration, Firebase, payment gateways, admin panels and dashboards, connecting an app to the systems a business already uses.
- Service 4 — App Maintenance & Modernisation: bug fixing, updates, performance work and modernising an existing app — including apps built by someone else.
- Service 5 — White-label Development for Agencies (callout box): "You keep the client. I build the app. If your agency sells websites, branding or marketing and a client asks for an app, I build it under your brand. Confidential, NDA on request, priced so your margin stays intact. Start with one small paid trial project." [PLACEHOLDER: white-label terms — NDA wording and trial-project size to be confirmed; do NOT state any revenue-share percentage.]

- Delivery process (8 steps): 1. Discovery — a short call to understand what the app needs to do and who it is for. 2. Requirements — features, screens and integrations written down and agreed before any code. 3. Proposal — a fixed-scope proposal with a quote and a timeline. 4. Development — built in Flutter, in weekly slices you can see. 5. Weekly demonstrations — a working demo every week, so nothing is a surprise at the end. 6. Testing — tested on Android and iOS before delivery, including the flows your customers actually use. 7. Delivery — handed over with the code and accounts in your name. 8. Maintenance — bug fixing and updates after launch, agreed per project. "You own the code and the store accounts from day one. I will sign your NDA on request."
- Technology: Flutter and Dart — one codebase for Android and iOS. Firebase. REST APIs. Payment gateway integration. Admin panels and dashboards. [PLACEHOLDER: do NOT list native Kotlin/Swift until I confirm.]

PRICING

- Title tag: `Pricing | Websites, App Audits & Custom App Quotes | Novexa Solutions`
- Meta description: `Website packages from $799. Mobile apps are quoted individually after a short scoping call. App and website audit $499, credited against a full project.`
- Intro: "Website packages have fixed starting prices below. Mobile apps are quoted individually — no two apps cost the same, so a fixed price would be dishonest. The audit is the low-risk way to start."
- Website packages — "All prices in USD. Starting prices — the final quote depends on the agreed scope." LAUNCH — $799/project: up to 5 pages, contact form, WhatsApp integration, basic SEO, 1 revision. BUSINESS — $1,799/project (most popular): up to 10 pages, blog, Google Analytics and Search Console, 2–3 revisions, post-launch support. PROFESSIONAL — $3,499/project: up to 15 pages, CMS, booking, payment gateway, API support, priority support, 3 revisions. [PLACEHOLDER: confirm these three prices are still current, and what "post-launch support" covers and for how long.]
- Mobile apps — custom quote: "1. A 15–30 minute call to agree what the app must do. 2. A written, fixed-scope proposal with a quote and a timeline. 3. A deposit to start, milestone payments as agreed, and final payment on delivery." [PLACEHOLDER: deposit/milestone structure to confirm.] "What affects the price: number of screens, features (subscriptions, payments, chat, maps), integrations (payment gateway, existing backend, third-party services), and whether a backend or admin panel is needed. You get the quote before any work starts, and the scope is fixed in writing."
- App & Website Audit — $499: "A short, written audit of your app or website — $499, credited against a full project if you proceed. I review the mobile experience (or subscription/checkout flow) and send back a one-page note: what is costing you users or orders, and what to fix first. You keep the note either way." [PLACEHOLDER: confirm the $499 price and what the one-page note covers.]

ABOUT

- Title tag: `About | Ateeq Lateef, Founder of Novexa Solutions`
- Meta description: `Novexa Solutions is a founder-led Flutter development studio run by Ateeq Lateef, based in Lahore, Pakistan, working with clients in the UK, USA and Europe.`
- Founder profile: "Ateeq Lateef — Founder, Novexa Solutions. I'm a Flutter developer based in Lahore, Pakistan. I have a BSc in Computer Engineering from Bahauddin Zakariya University, Multan (2020), and 6 years of experience building mobile apps and websites. I lead development on Tejarah World Marketplace, an e-commerce marketplace app on Google Play, and my work includes food ordering, on-demand services, delivery and logistics, business and POS apps, and AI-powered tools such as a WhatsApp CRM. My website work spans e-commerce, food, corporate, healthcare and hospitality, with 100 websites listed in my portfolio. Novexa Solutions is founder-led: I am the person you talk to, and the person who builds your app. There is no handover to a team you never meet, and no account manager between us. I work with clients in the UK, USA and Europe — and in Australia. My working hours overlap with UK business hours, and every project includes a weekly demo, so distance never means silence." [PLACEHOLDER: founder photo, LinkedIn link, confirm the working-hours overlap wording.]
- What founder-led means: you talk to the developer, not a salesperson; one person is responsible for the whole build; weekly demos, so you see progress every week; you own the code and the store accounts from day one; NDA welcome on request.
- What is NOT on this page: no "UK-Registered" claim, no team, no "100+ products" / "90+ apps" claims, no App Store claim.

CONTACT

- Title tag: `Contact Novexa Solutions | Start a Project`
- Meta description: `Start a Flutter app or website project with Novexa Solutions. Email contact@novexasolutions.uk — replies within 24 business hours.`
- "Start a project. Tell me what you want to build — an app, a website, or an app for your agency's client. I reply within 24 business hours."
- Email: contact@novexasolutions.uk. Hours: Monday–Friday, 09:00–18:00 UK time. [PLACEHOLDER: confirm consultation hours.]
- [PLACEHOLDER: WhatsApp — add only after I confirm the business number.]
- [PLACEHOLDER: Book a call — add only after I confirm a booking account.]
- Privacy notice (place directly under the contact form, before the submit button): "How your details are used: The details you send here (name, work email, company and project outline) are used only to reply to your enquiry. They are not shared with anyone else and are not used for marketing. You can ask for your details to be deleted at any time by emailing contact@novexasolutions.uk."

- Form fields (keep as they are): Full Name, Work Email, Company/Organization (optional), Estimated Budget (optional), Service of Interest, Project Outline & Objectives. Submit button: `Send my enquiry` (simpler wording; the old button said "DISPATCH INQUIRY TO NOVEXA SOLUTIONS").

FOOTER (all pages)

"© 2026 Novexa Solutions. Novexa Solutions is a founder-led Flutter development studio based in Lahore, Pakistan — working with clients in the UK, USA and Europe. Email: contact@novexasolutions.uk" + links: Home · Services · Pricing · About · Contact · Portfolio · Privacy.

PRIVACY PAGE (new, short)

A short privacy page built from the contact-form notice above: what details are collected (name, work email, company, project outline), that they are used only to reply to the enquiry, never shared and never used for marketing, and that anyone can ask for their details to be deleted by emailing contact@novexasolutions.uk.

---

6. PORTFOLIO PAGE — REAL PROJECTS ONLY (this is the proof section)

Build the Portfolio page in this order:

1. Intro (one line): "Selected work — real projects with live links, built by the founder." Include this disclaimer: "All listed websites/apps belong to their respective clients. Shared as examples of design/development experience; no claim of ownership over client brands, content, or IP."
2. Case Study 1 — Tejarah World Marketplace (full case study, below).
3. Case Study 2 — Ranchers Cafe (full case study, below).
4. Case Study 3 — Khidmah360 (full case study, below; customer + partner apps as one project).
5. More work — link lists only (the remaining apps + a note that the website portfolio lists 100 websites with live links, with 4–6 named examples). Each item is a link only — no invented description of what was built.
6. "What I can build for you" (short): Flutter e-commerce, subscription, food delivery, on-demand and business apps — the categories these three case studies demonstrate.
7. Contact strip: email contact@novexasolutions.uk, reply within 24 business hours. No WhatsApp number and no booking link until confirmed.

Per-case-study layout (same for all three): project name + type → live links (Play Store / website buttons) → what is known → what I did → technologies → outcome (SHOW the outcome section

ONLY if a verifiable outcome is provided; otherwise OMIT it entirely — never fill it with a vague claim).

CASE STUDY 1 — Tejarah World Marketplace

- E-commerce marketplace app (Android). Live on Google Play: https://play.google.com/store/apps/details?id=zarin.tejarahworld.com.user
- Companion website: https://tejarahworld.com
- My role: LEAD DEVELOPER (this is the ONE project where my role is verified — say so).
- Technology: Flutter. (Per-project stack beyond Flutter is unconfirmed — do not assign a specific payment gateway, backend or database to this project.)
- Problem/brief, feature list actually built, screenshots, App Store link, rating, downloads, client feedback: NOT AVAILABLE. Do not invent any of them. The case study shows the live links and the lead-developer role only, plus a general line that a marketplace app lets buyers browse, order and pay across multiple sellers in one place. Outcome section: OMIT.
- [PLACEHOLDER: 3–5 phone screenshots of the live app; App Store link if an iOS version exists; any real rating/downloads/client quote — only if I provide them.]

CASE STUDY 2 — Ranchers Cafe

- Food ordering app and website. App (Google Play): https://play.google.com/store/apps/details?id=com.ranchers.customer
- Website: https://rancherscafe.com
- My role: NOT STATED in my records. Do NOT call me lead developer on this project. Say only that it is a client project I worked on.
- Technology: Flutter. (Per-project stack beyond Flutter is unconfirmed.)
- Problem/brief, feature list, screenshots, App Store link, rating, downloads, client feedback: NOT AVAILABLE. Do not invent any of them. Outcome section: OMIT.
- [PLACEHOLDER: my actual role on this project (app, website, both, or part of a team); 3–5 app screenshots; 2–3 website screenshots; App Store link if it exists.]

CASE STUDY 3 — Khidmah360

- On-demand home services app — TWO Android apps, one system. Customer app (Google Play): https://play.google.com/store/apps/details?id=khidmah360user.zarin.solutions
- Partner app (Google Play): https://play.google.com/store/apps/details?id=khidmah360partner.zarin.solutions
- No website is listed for Khidmah360. [PLACEHOLDER: website URL if one exists.]
- My role: NOT STATED in my records. Do NOT call me lead developer on this project.
- Technology: Flutter. (Per-project stack beyond Flutter is unconfirmed.)

- Problem/brief, feature list per app, screenshots, App Store links, ratings, downloads, bookings, client feedback: NOT AVAILABLE. Do not invent any of them. Outcome section: OMIT.
- [PLACEHOLDER: my actual role (customer app, partner app, both, or part of a team); features built in each app; 3–5 screenshots per app; App Store links if they exist.]

MORE WORK — REMAINING APPS (link list only, no descriptions)

- Friday Charm (perfume e-commerce app) — https://play.google.com/store/apps/details?id=com.fridaycharm
- Rehmania Herbs — https://play.google.com/store/apps/details?id=rehmaniaherbs.zarin.solutions
- Sargodha Autos — https://play.google.com/store/apps/details?id=sgdautos.zarin.solutions
- Tandoori Restaurant Pakistan — https://play.google.com/store/apps/details?id=com.blink.tandoori
- David Kebab — https://play.google.com/store/apps/details?id=davidkebab.zarin.solutions
- Zarin POS – Complete Offline POS — https://play.google.com/store/apps/details?id=pos.zarin.solutions
- What's Ai Chat – AI CRM for WhatsApp — https://play.google.com/store/apps/details?id=whatsaichat.com
- Hero Deliver Express — https://play.google.com/store/apps/details?id=herodeliver.zarin.solutions
- Substitutes if any case study above cannot be completed: Friday Charm (perfume e-commerce app + website https://www.fridaycharm.com) and P448 (fashion e-commerce website https://p448.com). Same honesty standard applies to them.

WEBSITE PORTFOLIO — 100 WEBSITES WITH LIVE LINKS (appendix for the portfolio page)

Show the count as "100 websites listed" and show named examples grouped by category, each with its real link. Do not invent a description of any website — name + link only. The full list (use all of these):

7. DESIGN & TECHNICAL REQUIREMENTS

- **Design:** clean, modern, professional. Navy + teal colour scheme (navy like #0A1A2F, teal accent like #14B8A6 — the same palette as my LinkedIn banner). No clutter, generous white space, clear headings, one clear action per section.
- **Mobile-first responsive.** The site must look right on a phone first, then tablet, then desktop. Test the layout at phone width.
- **Fast.** Lightweight, no heavy frameworks or animations that slow loading. The current site loads fast — keep that.
- **Images:** use REAL screenshots of the actual apps and websites only. Where a screenshot is missing, use a clean text/graphic card with the project name and a link — never a fake screenshot, never a stock photo, and never an AI-generated image of a person, an office or a team. No image may show a person pretending to be me or my staff.
- **Navigation:** Home · Services · Pricing · Portfolio · About · Contact (same order on every page). Footer on every page with the corrected copyright line and the Privacy link.
- **URLs:** keep the existing 5 page URLs; add /portfolio and /privacy. Keep robots.txt and sitemap.xml working.
- **SEO:** use the title tags and meta descriptions given in section 5, exactly. One H1 per page. All Play Store and website links must be real, clickable links (the exact URLs in section 6 — copy them character for character).
- **Contact form:** keep the fields listed in section 5, with the privacy notice directly under the form. The form must send enquiries to contact@novexasolutions.uk.
- **No fake interactivity:** no fake live-chat widget, no fake "clients online" counter, no fake availability badge, no pop-ups pretending to be a person.

---

8. STRICT RULES — NEVER DO THESE (they are the reason the old site failed)

1. Never invent a download count, user count, order volume, revenue increase, rating or review count for any project.
2. Never invent a client name beyond the brand/app names in section 6. Do not invent a company behind a brand or a client contact person.
3. Never call me "lead developer" on any project except Tejarah World Marketplace.
4. Never present a personal or academic project as a client delivery.
5. Never say any app is "live on the App Store" or "on iOS App Store" — the portfolio has Play Store links only. Saying the apps are built in Flutter for Android and iOS is fine; claiming a store listing is not.
6. Never use "90+ apps", "100+ products", "12+ live on stores" or any other unverified count. Counted figures only: 12 Android apps with live Play Store links; 100 websites listed.
7. Never assign a specific payment gateway, backend, database or third-party service to a project. Portfolio-level capabilities (Firebase, REST APIs, payment gateways, admin panels) are fine; per-project tech beyond Flutter is not verified.
8. Never write a testimonial. There are none. A testimonial appears only if a real client provides one with name, role and company.
9. Never claim the business is UK-registered, UK-based, or has a UK office, company number, VAT number or director — none is verified.
10. Never use plural team language ("our engineers", "senior architects", "leadership team", "our team"). It is a one-person, founder-led studio.
11. Never reuse the old site's invented content: the 4 "Featured Systems & Case Architectures", the "100/100 Core Web Vitals" / "75% reduction" / "Sub-50ms" metrics, the "What Clients Value" generic cards, the "6 Core Disciplines" stat, or the "Enterprise-Grade / mission-critical" positioning.
12. Never claim ownership over client brands, content or IP — repeat the portfolio disclaimer from section 6 wherever work is shown.
13. Never fill a [PLACEHOLDER] with a guess. Leave it visibly marked so I can fill it in.

---

9. ALL [PLACEHOLDER] ITEMS IN ONE PLACE (things only I can answer — leave them marked)

1. Business registration: company number + registered address, if the business is registered anywhere. (Until then: no registration claim anywhere.)
2. WhatsApp business number (LinkedIn shows +92 308 7310103 — NOT confirmed as business).
3. Booking account for "Book a call" (e.g. Calendly) — or drop that line.
4. Founder photo + LinkedIn profile link for the About page and homepage founder line.
5. App screenshots: 3–5 phone screenshots per app (Tejarah, Ranchers, Khidmah360 customer
    - partner); 2–3 website screenshots (Tejarah, Ranchers).

6. App Store (iOS) links, if any iOS versions exist.
7. Khidmah360 website URL, if one exists.
8. My actual roles on Ranchers Cafe and Khidmah360 (Tejarah = lead developer is confirmed).
9. The real problem/brief and feature list for each of the three case-study apps.
10. Any real, publishable outcome per project (rating, downloads, client feedback) — if none, the outcome sections stay out.
11. Commercial terms: deposit/milestone structure, revision policy, whether VAT applies, what "post-launch support" covers and for how long, whether the $799/$1,799/$3,499/$499 prices are still current, and what the $499 audit note covers.
12. White-label terms: NDA wording, trial-project size. (No revenue-share percentage.)
13. Working-hours overlap wording + consultation hours (draft: Mon–Fri 09:00–18:00 UK time).
14. Whether to list native Kotlin/Swift experience (default: no).
15. A real client testimonial (name, role, company) — only if a client agrees to be quoted.

---

10. DELIVERABLE & SELF-CHECK

Deliver a COMPLETE rebuilt website: all 7 pages, with the copy in section 5, the portfolio in section 6, the design in section 7, and every placeholder in section 9 left visibly marked (not guessed). Before you finish, check your own work against this list and fix anything that fails:

- [ ] Every factual claim traces to this prompt — nothing invented.
- [ ] "Flutter", "Ateeq Lateef", "Lahore" and "Pakistan" appear on the homepage and About.
- [ ] No "UK-Registered" / "UK-based" claim anywhere; no company number, VAT or director.
- [ ] No plural team language anywhere; no "90+ apps" / "100+ products" anywhere.
- [ ] No App Store claim anywhere; no testimonial anywhere; no invented metric anywhere.
- [ ] The 4 fake "case architectures" and their metrics are gone.
- [ ] All 12 Play Store links are present, exact, and clickable; the 100 websites are listed with their real links.
- [ ] "Lead developer" appears ONLY for Tejarah World Marketplace.
- [ ] Footer reads "© 2026 Novexa Solutions" (with the space) on every page.
- [ ] Prices show "All prices in USD. Starting prices — the final quote depends on the agreed scope." Apps are custom-quote only; audit is $499 credited against a project.
- [ ] Contact form has the privacy notice directly under it; no dead "book a call" CTA.
- [ ] Title tags and meta descriptions match section 5 exactly.
- [ ] Layout works at phone width (mobile-first), loads fast, and every placeholder from section 9 is visibly marked, not filled with a guess.
- [ ] At the end, list for me: (a) anything you could not build because a placeholder is still empty, and (b) the exact questions from section 9 you need me to answer next.
